DETAILED ACTION

1. This communication is responsive to Amendment dated 1/14/2005.
2. Claims 1-10 are elected; claims 11-15 are cancelled.
3. Claims 1-10 are allowed.
4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hara et al U.S. Patent No. 6,617,056 discloses a crystalline transparent conductive film substantially made of In-Sn-O. The crystalline part of the transparent conductive film (ITO-film) has a specific crystalline structure in which the X-ray diffraction intensity from the (222) crystal plane or the (440) crystal lane is highest, and $[X_{440/222}]$, the ratio of the X-ray diffraction intensity from the (440) crystal plane to that from the (222) crystal plane, is within the range of 0.2 to 2.5. It has a low resistivity, and useful as an electrode material for a liquid crystal display.

5. The following is an examiner's statement of reasons for allowance:

Applicant's claimed invention distinguishes over the prior art for the following reasons. The claims are allowable over the prior art of record because none of the references, either alone or in combination, discloses or renders obvious a liquid crystal display device comprising at least one **inorganic alignment film**, which is **made of a crystalline conductive film where crystal grains are oriented in a predetermined direction preferentially**.
